

The Pragmatic Framework for Data Intelligence

Data Intelligence | Data Governance | Data Catalog

BUSINESS GLOSSARY

- Functional and technical definitions
- Track policy attributes

DATA CATALOG AND DATA SYSTEM INVENTORY

- Data system details, documentation, and curation
- Data models and technical metadata
- Automated data model synchronization and discovery

DATA STEWARDSHIP AND GOVERNANCE FRAMEWORK

- Data domain classification
- Data stewardship, ownership, and oversight roles
- Points of engagement for discovery and requesting
- Workflows and notifications for stewardship and support
- Data Governance progress metrics and queue reporting

REPORT CATALOG AND REPORT REQUEST WORKFLOWS

- Inventory and curate reports from multiple reporting tools
- Manage requests for new or changed reports
- Reporting tool and ticketing system integrations

DATA FLOW CATALOG (ETL/INTEGRATION) AND LINEAGE

- Document ETL/Integration processes or mappings
- Document/view data lineage between systems/objects

DATA QUALITY MANAGEMENT

- Data quality issue reporting and resolution
- Data quality rules and assessments
- Integrated and automated data quality monitoring

REFERENCE DATA MANAGEMENT

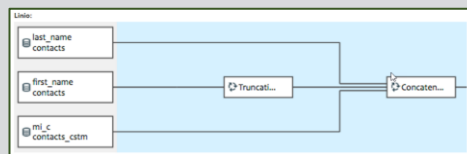

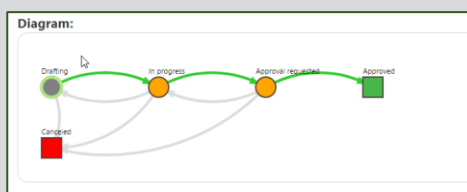

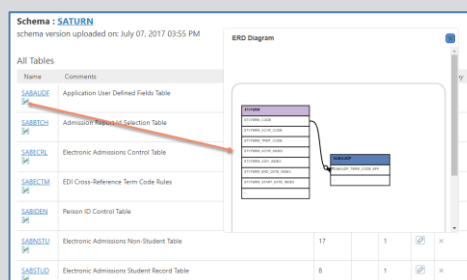

- Documenting and approving reference data lists
- Mapping reference data between data systems
- Synchronizing reference values w/data system integrations

Data Governance, Stewardship, and Intelligence

The Data Cookbook is a complete online data intelligence solution.

An integrated SaaS solution that provides a pragmatic framework to support data governance and data catalog best practices

ROBUST SEARCH AND ENGAGEMENT WITH CONTENT

- Expansive content search in the UI or with API's.
- Semantic information search on all data intelligence content
- Submit requests to workflows for new content or issues

DATA POLICY MANAGEMENT AND ASSIGNMENTS

- Document, approve, and manage data policies
- Define data policy attributes (privacy, retention, etc.)
- Associate attributes to data intelligence content.

CHANGE MANAGEMENT AND IMPACT ANALYSIS

- Object versioning, status, audit, and comment history
- Automated reporting of change impact analysis

DATA STANDARDS COMMUNITY

- Shared definitions and specifications between clients
- Import definitions from data standards organizations

INTEGRATION FEATURES

- APIs to support sharing content within reporting tools
- Automated data system integration
- Batch import and export tools

SaaS APPLICATION ARCHITECTURE WITH SSO

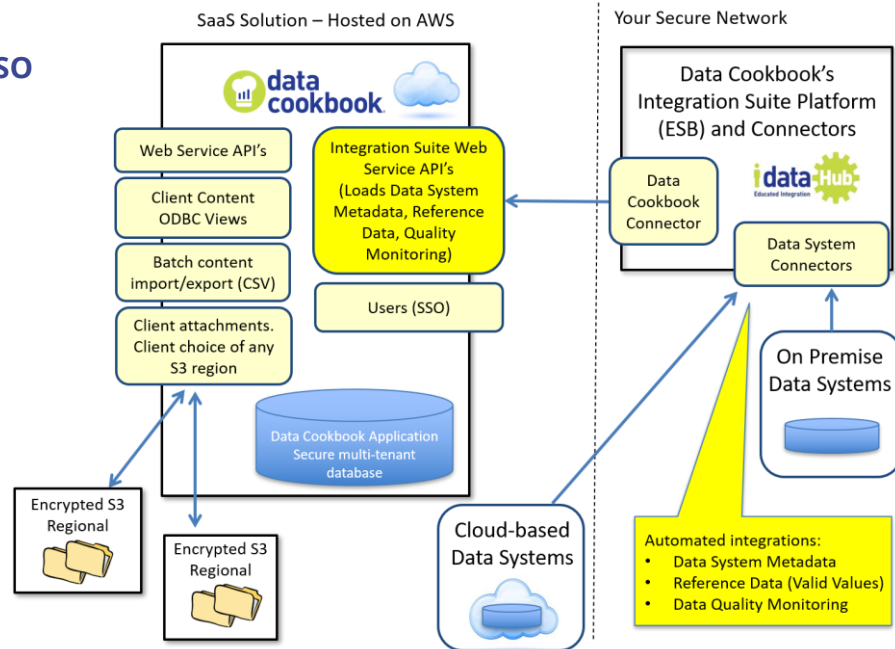

- AWS hosted SaaS Solution
- Single Sign on with UNLIMITED users

Return on Investment for Data Intelligence

- Build trust in your data
- Multiply the value your reporting tool investments
- Provide data training tools
- Facilitate audit requirements
- Accelerate regulatory reporting, while avoiding mistakes
- Educate users on privacy and security rules and usage
- Support data-driven decisions
- Facilitate self-service reporting
- Fix reporting issues before they get expensive
- Help detect and stop fraud
